(a) Max cost: point prediction
worst-case (expected) ratio
prediction error η
min(1 + 2η, 3)
min(1 + η, 3)
deterministic, prediction may be in a zone
deterministic, feasible prediction (Fang et al.)
randomized snapping, any prediction
(b) Max cost: interval prediction
interval width ω (optimum inside)
min(1 + ω, 3)
1 + ω/2
CenterMinMaxP* (deterministic)
randomized centre snapping
(c) Social cost frontier, n = 7
consistency
robustness
deterministic PhantomMedian[k]* (exact)
mix of k=4 with spike
mix of k=6 with spike
spike (no prediction)
k=0
k=2
k=4
k=6
